OPENING THE WAY TO HEALING AND HOPE
Learning to recognize and respond to the challenges of addiction

Medical and Professional Education Programs
Dear Friends,

With every medical student, physician, nurse, pharmacist, mental health clinician, social worker, criminal justice professional and school counselor we educate about addiction, we are forging stronger inroads against the disease.

In 2018, more than 1,700 individuals participated in our Medical and Professional Education programs on-site, online and on the road—a figure that translates into an incalculable amount of help and healing when you consider the life-changing impact participants go on to make in their schools, hospitals and communities. You will meet two such “alums” in this report, medical student Claire Healy and family practice resident Jeremiah Fairbanks, who share their newfound insights into how to best help patients and families find healing from addiction.

Our educational approach is immersive and transformative, providing participants with the opportunity to learn about the dynamics of addiction and recovery alongside clinicians, patients and families. Smashing the stigma associated with substance use disorders is a huge part of our mission as well, opening minds and hearts to recognize the human being behind the disease.

On behalf of Claire, Jeremiah and the thousands of students and professionals who came to us to learn about addiction—as well as all who will benefit from their knowledge, insight and commitment going forward—thank you for your partnership and support.

Together, we will overcome addiction.

Joseph Skrajewski, MA, MFTI
Executive Director of Medical and Professional Education
Hazelden Betty Ford Foundation

The Power of Your Giving in 2018

We welcomed participants from the United States, Canada, Mexico, Europe, Asia and the Caribbean.

BY THE NUMBERS

ON-SITE
374 professionals and medical students participated in our Professionals in Residence and Summer Institute for Medical Student programs, intensive, weeklong on-campus educational opportunities where participants shadow clinicians and patients alike to learn about addiction, treatment and recovery.

ONLINE
650 medical, nurse practitioner and physician assistant students worldwide enrolled in CARE: Course on Addiction Recovery Education/Aquifer Addiction, completing 1,800 sessions. This online addiction education program for students was developed by the Hazelden Betty Ford Foundation in collaboration with MedU, the American Society of Addiction Medicine (ASAM) and the Treatment Research Institute (TRI).

ON THE ROAD
680 attendees learned about addiction, treatment and recovery at our educational symposia and events at universities and other venues in California, Connecticut, Kansas, Maryland, Massachusetts, Minnesota, Missouri, Texas, Virginia and Washington, DC.

Please visit HazeldenBettyFord.org/MedEd to learn more about all of our educational opportunities.
BEFORE & AFTER
A Powerful Measure of Impact and New Insight

Students and professionals are evaluated for their understanding of addiction when they apply to participate in our Medical and Professional Education programs, and then again at the end of their weeklong sessions. The goal of our programs is to raise the awareness of participants so that they are able to respond positively to all survey statements.

### SURVEY STATEMENTS

### THERE’S ALWAYS HOPE

“One major insight I’ve gained is the courage and strength it takes to surrender and admit that it is time for help. There is always hope for every single individual with an addiction. There is always an opportunity for recovery, no matter the circumstance.”

Valerie J., University of Maryland School of Medicine

### THE FACES OF ADDICTION

“This experience has taught me more about addiction, recovery, resilience and vulnerability than any book or years of education could ever do. I will take this experience with me to help shape the way I see and respond to the faces of addiction.”

Chris C., Family Medicine Resident

### A NEW OPTIMISM

“As an aspiring emergency medicine physician, this week provided me hope and optimism for the future of treating addiction.”

Amar D., Johns Hopkins University School of Medicine
Meet Claire Healy, a second-year student at the College of Osteopathic Medicine of the Pacific, Western University of Health Sciences, in Pomona, California. A 2018 participant in the Summer Institute for Medical Students program at the Hazelden Betty Ford Foundation, Claire shares how her week participating with patients and clinicians at the Betty Ford Center in Rancho Mirage, California, has forever changed her perceptions about addiction and her understanding of how to help future patients and their families.

Why did you apply to the Summer Institute for Medical Students program?

Substance use disorder is a disease that runs in my family, so I had a strong personal interest in learning more about addiction treatment and recovery. As a medical student, I also thought it would be valuable to understand the disease from the perspectives of patients and treatment providers. Addiction is such a complex and prevalent disease. No matter the area of medicine I eventually practice, I will be working with patients who are challenged by addiction—whether their own struggle or a loved one’s.

As a future physician, what was your biggest takeaway from the experience?

One experience that stands out was hearing patients say how much they wish their primary care physician had talked with them about issues related to alcohol or drug use. Most patients never had that conversation with their doctor. I now see it as my role, as a future physician, to get those conversations started with patients so we can identify health risks and other problematic issues that could be related to substance use.

I wasn’t surprised so much as I was deeply moved and inspired. The program humanizes the disease of addiction and the process of treatment and recovery in a way that no lecture or textbook ever could. I felt a sense of connection and mutual respect with everyone I met: the patients, the addiction counselors, and the other medical students in the program. I left with new insight and wisdom about issues related to alcohol or drug use. Most patients never had that discussion by asking open-ended questions. For example, instead of asking, “Do you drink heavily?” I might say something like, “Tell me about your alcohol use …” Cultivating a nonjudgmental atmosphere is valuable to understand the disease from the perspectives of patients and treatment providers.

I will also be much more comfortable when I talk about addiction with my patients, thanks to the SIMS experience. Sometimes patients don’t realize they have a problem until it’s brought to their attention. Sometimes patients aren’t comfortable talking about their personal lives or their substance use. I learned how to facilitate those discussions by asking open-ended questions. For example, instead of asking, “Do you drink heavily?” I might say something like, “Tell me about your alcohol use …” Cultivating a nonjudgmental atmosphere and getting those conversations started can open the way to healing.

Was there anything about your experience that was unexpected?

I wasn’t surprised so much as I was deeply moved and inspired. The program humanizes the disease of addiction and the process of treatment and recovery in a way that no lecture or textbook ever could. I felt a sense of connection and mutual respect with everyone I met: the patients, the addiction counselors, and the other medical students in the program. I left with new insight and wisdom about myself and about the role I want to play in my patients’ lives in terms of providing compassionate support, guidance and advocacy.
“I am deeply thankful to the donors who gave me such a tremendous opportunity. I will carry the experience forever in my heart and in my work.”

Claire Healy
As a part of its mission to help people lead lives free of the effects of alcohol addiction, the Peter G. Dodge Foundation (PGDF) is funding a major expansion to the online Course in Addiction and Recovery Education (CARE)/Aquifer Addiction, which is offered through the Hazelden Betty Ford Foundation to medical, nurse practitioner and physician assistant schools worldwide.

Thanks to PGDF’s grant, six new case studies on alcohol use disorders will be added to the innovative curriculum.

Bringing medical professionals up to date on current practice in addiction medicine is an important goal of PGDF, says Elizabeth Cairns, executive director.

“Very few medical schools require or even offer education on addiction,” Cairns explains. “With the current opioid crisis, people are starting to realize the folly in that. Yet, amazingly, alcohol use disorder is far more prevalent than opioid addiction, with alcohol accounting for 70 percent of substance use disorders.”

Primary care physicians have a tremendous opportunity and, Cairns suggests, a fundamental responsibility to screen people for alcohol use disorder and intervene before the problem worsens.

“It is essential for medical providers to have an understanding of what to do next and what treatment options are available when a patient screens positive for alcohol use disorder,” she says. The expanded CARE curriculum will address these topics in greater depth.

Through PGDF’s collaboration with the Hazelden Betty Ford Foundation and other like-minded organizations, Cairns sees exciting breakthroughs ahead. She points to the growing consensus among addiction experts that a multi-strategy, personalized approach that involves physical, behavioral, social and spiritual components offers the most effective approach to treating addiction.

“It’s incredibly inspiring to collaborate with researchers, clinicians and educators who are working hard every day to solve a really complicated problem,” Cairns reflects. “I am hopeful that, in the near future, our combined efforts will culminate in tangible improvements in how alcohol addiction is treated in the United States.”

What a difference you make

The life-changing educational efforts of the Hazelden Betty Ford Foundation would not be possible without you, our donors. On behalf of more than 1,700 medical students and professionals who participated in our programs on-site, online and on the road in 2018—and the countless individuals, families and communities they will help—we thank you for your generosity and commitment.

We invite you to learn more about how the power of your giving supports addiction education and awareness. Please call 888-535-9485 or email us at Giving@HazeldenBettyFord.org or visit HazeldenBettyFord.org/Donate website. Our mailing address is PO Box 64348, St. Paul, MN 55164.
Why did you apply to the Professionals in Residence program at Center City?

As a medical student and now a resident, the more I have learned about substance use disorder, the more I’ve become fascinated with the disease. Addiction is still widely misunderstood, even in the medical community, and it carries a lot of social stigma. I want to do what I can to change that. I’m passionate about utilizing all of the knowledge, skills and tools I have as a physician to partner with my patients who are faced with this disease.

A big part of my interest in addiction medicine stems from trying to understand what happened with one of my best friends growing up. We were raised in similar families, hung out in the same social circles, went to the same church and had many of the same interests. We basically had the same upbringing, but he ended up developing a substance use disorder. Today he is homeless, living in Seattle and in active addiction. Through the luck of biology or some other twist in life circumstances, that’s not been my fate.

As a physician, what was your biggest takeaway from the experience?

I gained tremendous insight and respect for what it takes to overcome a substance use disorder. People need to be willing to change just about everything in their lives in order to protect their sobriety. I met an anesthesiologist who planned to give up his profession because access to drugs would be too tempting, and I met so many other bright and accomplished people who had to re-evaluate their lives from top to bottom—relationships, career, lifestyle—everything.

So, when physicians recommend addiction treatment for our patients, we need to appreciate the scope of what we are proposing. Treatment isn’t about going to a 30-day program and coming back cured. Treatment is about learning you have a chronic disease that requires you to change the way you live.

How has the experience changed the way you practice medicine?

I have a new and much more intimate understanding of what happens in addiction treatment. I feel equipped to partner with my patients at a much higher caliber in addressing substance use disorders. For patients contemplating treatment, I can remove some of the mystery and apprehension by describing what happens in treatment, what they can expect and what a typical day in a program might involve. For patients coming out of a treatment program, I can offer effective guidance and resources as they learn to manage their disease, grow stronger in their sobriety and regain their health.
Across the Hazelden Betty Ford Foundation, our doors have always been open to other care providers and helping professionals to come and learn about addiction prevention, assessment, treatment and recovery. Thanks to generous donor support, our Medical and Professional Education programs have grown to include:

<table>
